

Week 1 Findings Report

Zynxis AI/ML Internship

Name: Muhammad Abdullah

Dataset: Titanic Dataset

Objective

Perform Exploratory Data Analysis (EDA) on the Titanic dataset by exploring its structure, cleaning missing values, and discovering meaningful patterns through visualization.

Key Findings

- The dataset contains passenger information such as age, gender, passenger class, fare, and survival status.
- Missing values in Age, Cabin, and Embarked were successfully handled.
- Female passengers showed a higher survival rate than male passengers.
- Most passengers belonged to Passenger Class 3.
- Most passengers were between 20 and 40 years old.
- Correlation analysis highlighted relationships among numerical features useful for future machine learning models.

Conclusion

The Titanic dataset was successfully explored and cleaned. The resulting dataset is suitable for further preprocessing and machine learning tasks in the upcoming weeks of the internship.
